

## Product Overview

# WellPlus™ AQFS220W Salt Free Water Softener

The AQFS220W is specifically designed for homes on well water systems and under 2,500 square feet. Our single cartridge system sequesters both calcium and iron and prevents hard water scale while also providing a proprietary, coconut carbon infused pleated filter design. This design allows for a high flow rate with a high dirt loading capacity that while also eliminating odors and off taste. The AQFS220W will effectively remove rust, dirt, silt and other sediment at a 5 micron level while our salt free technology will address limescale and iron stain without the use of salt and without removing the healthy minerals from your water.

### Technical Specifications

- Dimensions: 23.4"x5.4"
- Port Size: 3/4" threaded
- Max Operating Pressure: 85 psi
- Operating Temp: 40°-100°F
- Flow Rate: 12 GPM
- Filter Rating: 5 micron
- Filter Medium: Carbon pleated
- Filter Life: 3-6 months<sup>1</sup>
- Max water hardness: 22 GPG<sup>2</sup>

### Replacement Cartridge

- RCFS220W

### Salt Free Conditioning

The Aquios system doesn't use salt to address hard water issues. We use a natural, FDA approved, food grade additive that is proven to be effective in the prevention of limescale and iron stain. These hard water minerals are sequestered and keeps them in a dissolved form which prevents them from forming scale. It also, over time, will remove existing scale.

### Chlorine / Odor Removal

The AQFS220W cartridge uses a unique design that infuses granular coconut carbon onto the outer pleats. If you are treating your water, it will remove chlorine in addition to other undesirable odors and tastes such as sulphur that may exist. The result is clean, great tasting, scale free water with a single cartridge.

### Sediment Control

Dirt, silt, rust and other sediment is effectively removed from your water leaving it clean. The 5 micron filter rating keeps sediment, in the cartridge and not in your glass.

### Corrosion Control

In addition to scale prevention and filtration, the AQFS220W system will prevent corrosion of pipes and plumbing. It does this by placing a thin, protective layer throughout your pipes.

### Easy Installation

Installation is brilliantly simple. Just connect the unit to the main water line where it enters the home, mount to the wall and you're done. An average install takes a plumber around an hour and a DIY install usually takes about two hours.

### 20 Year Warranty

All Aquios systems come with an industry leading 20 year warranty on the housing and head assembly. If any of our systems ever fail, we will replace or repair it. It's that simple.<sup>3</sup>

1. Filter life can vary and will be affected by existing water conditions  
 2. The Aquios system will effectively treat water with a hardness up to 22 gpg or 380 ppm  
 3. Restrictions and exception apply.
